The data

netflix_data.csv

Netflix! What started in 1997 as a DVD rental service has since exploded into one of the largest entertainment and media companies.

Given the large number of movies and series available on the platform, it is a perfect opportunity to flex your exploratory data analysis skills and dive into the entertainment industry.

You work for a production company that specializes in nostalgic styles. You want to do some research on movies released in the 1990's. You'll delve into Netflix data and perform exploratory data analysis to better understand this awesome movie decade!

You have been supplied with the dataset `netflix_data.csv`, along with the following table detailing the column names and descriptions. Feel free to experiment further after submitting!

The data

netflix_data.csv

Column	Description
`show_id`	The ID of the show
`type`	Type of show
`title`	Title of the show
`director`	Director of the show

`country`	Country of origin
`date_added`	Date added to Netflix
`release_year`	Year of Netflix release
`duration`	Duration of the show in minutes
`description`	Description of the show
`genre`	Show genre

```
# Importing pandas and matplotlib
import pandas as pd
import matplotlib.pyplot as plt
import numpy as np

# Read in the Netflix CSV as a DataFrame
netflix_df = pd.read_csv("netflix_data.csv")
```

```
netflix_df.head()
```

				director	cast
0	s2	Movie	7:19	Jorge Michel Grau	Demián Bichir, Héctor Bonilla, Oscar Serrano,...
1	s3	Movie	23:59	Gilbert Chan	Tedd Chan, Stella Chung, Henley Hii, Lawren...
2	s4	Movie	9	Shane Acker	Elijah Wood, John C. Reilly, Jennifer Connelly...
3	s5	Movie	21	Robert Luketic	Jim Sturgess, Kevin Spacey, Kate Bosworth, A...
4	s6	TV Show	46	Serdar Akar	Erdal Beşikçioğlu, Yasemin Allen, Melis Birka...

Rows: 5 Expand

Calculating the Most frequent movie duration in the 1990s

```
netflix_with_yr_dur = []
netflix_with_gen_dur = []
time = {}
max_count = 0
for index, row in netflix_df.iterrows():
    year = row["release_year"]
    dur = row["duration"]
    genre = row["genre"]
    if year < 2000 and year > 1989 :
        #print(str(year) + " = " +str(dur))
        netflix_with_yr_dur.append([year, dur])
        netflix_with_gen_dur.append([genre, dur])

for item in netflix_with_yr_dur:
    new_item = item[1]
    count = sum(sublist.count(new_item) for sublist in netflix_with_yr_dur )
    time[new_item] = count

duration = max(time, key= time.get)
year = time[duration]
print("The most frequent movie duration in the 1990s was " + str(duration) + "min appearing "
+ str(year) + "times")
```

```
The most frequent movie duration in the 1990s was 94min appearing 7times
```

Total Count of Short Action Movies

```
short_movie_count = 0
gen_count = {}
new_genre = []

for item in netflix_with_gen_dur:
    cur_item = item[0]
    if cur_item == 'Action':
        new_genre.append(item)

for item in new_genre:
    new_item = item[1]
    count = sum(sublist.count(new_item) for sublist in new_genre)
    gen_count[new_item] = count

for key, value in gen_count.items():
    if key < 90:
        short_movie_count = short_movie_count + value
    else:
        short_movie_count = short_movie_count

print(short_movie_count)
```
